- Django

PROJECTS

BLOSSOM BUDDIES FRONT-END CAPSTONE

Blossom Buddies was created to provide information and convenience to beginner gardeners who want to plan and produce a successful organic garden. This application focuses on a method of gardening called companion planting, which groups plants that benefit from growing in close proximity to each other. My goal for this application was to help users grow organic produce without having to "weed" through an abundance of resources to find their perfect companions.

- Single-page app utilizing React, React Router, and JSON server API calls
- Full CRUD functionality
- Styling was achieved through CSS and Material UI
